SUMMARY

Backend Developer with 7+ years of experience building production systems for GPS tracking and internal operations. Experienced in end-to-end backend delivery, translating business requirements into system flows, relational data models, REST APIs, business logic, testing, deployment, and production troubleshooting.

TECHNICAL SKILLS

Backend: PHP, Laravel, REST APIs, Laravel Scheduler / Cron Jobs

Database & Design: MySQL, SQL, Relational Data Modeling, System Design, API & Business Logic Design

Engineering: Git, Postman, API Documentation, Testing, Debugging, Performance Optimization

Integrations: OneSignal, SendGrid, Google OAuth, QR Code

PROFESSIONAL EXPERIENCE

Vastel | Web Developer - Backend, Admin Orin

2021 - Present

Sole backend developer for an internal operational platform supporting ~12,000 registered users, ~4,000 active users, ~6,000 active GPS units, and 10,000+ device/GSM inventory records.

- Own backend delivery from requirement analysis and system-flow design through database modeling, REST API development, testing, staging, production release, and troubleshooting.
- Designed and developed customer lifecycle workflows from scratch covering Sales Orders, inventory allocation, Orders, technician Visits, payment verification, customer provisioning, renewals, prorated subscriptions, and 25+ product packages.
- Implemented payment-to-provisioning business logic that calculates subscription dates, creates or updates customer accounts and GPS devices, and synchronizes licenses and device features after payment verification.
- Optimized renewal processing for customers with 800+ GPS units using grouped processing, preloaded related data, bulk inserts/upserts, and reduced repeated database queries.
- Designed and built a role-based Kanban module for task categories and role/individual ownership; also developed reseller operations, subscription/offline-unit monitoring, workflow notifications, and operational dashboards.

Vastel | Web Developer - Orin GPS Tracking Platform

Feb 2019 - 2021

Contributed to the early development and optimization of Orin, a GPS tracking platform for vehicles, heavy equipment, and other assets.

- Implemented GPS device integrations from manufacturer protocol specifications, decoding incoming messages into structured telemetry including coordinates, speed, ignition state, and timestamps.
- Improved location-data quality by filtering abnormal GPS coordinate jumps using distance, time intervals, and vehicle movement state.
- Developed telemetry logic for moving, idle, and stopped states, then used those states for journey reporting covering distance, driving duration, stop duration, and stop locations.

PERSONAL PROJECTS

AI-Powered Personal Finance Bot - Telegram-based personal finance system for daily transaction tracking, categorization, automated monthly reporting, and natural-language Q&A over Google Sheets data through an integrated AI layer.

Stock Screening & Strategy Evaluation - PHP-based multi-strategy stock screener that logs signals and subsequent returns to Google Sheets, enabling historical comparison of average return and profitability by strategy.

EDUCATION & LANGUAGES

Bachelor's Degree in Informatics Engineering - Universitas Brawijaya, 2019

Indonesian: Native | English: Intermediate / Working Proficiency
