SUMMARY

Backend Developer with 7+ years of experience building production systems for GPS tracking and internal business operations. Owns backend delivery end-to-end - translating business requirements into system workflows, relational data models, REST APIs, business logic, testing, deployment, and production troubleshooting.

TECHNICAL SKILLS

Backend: PHP, Laravel, REST API, Laravel Scheduler / Cron Jobs

Database & Design: MySQL, MariaDB, SQL, Relational Database Design, System Flow, API & Business Logic Design

Engineering: Git, Postman, API Documentation, Testing, Debugging, Caching, Performance Optimization, Application Security

Integrations: OneSignal, SendGrid, Google OAuth, QR Code

PROFESSIONAL EXPERIENCE

Vastel | Web Developer - Backend, Admin Orin 2021 - Present
Sole backend developer for an internal operational platform supporting ~12,000 registered users, ~4,000 active users, ~6,000 active GPS units, and 10,000+ device/GSM inventory records.

- Own backend delivery from requirement analysis and system-flow design through database modeling, REST API development, testing, staging, production release, and troubleshooting.
- Designed and developed an end-to-end order workflow from scratch covering Sales Orders, technician visits, Orders, invoicing, installations, renewals, prorated subscriptions, inventory allocation, and 25+ product packages.
- Optimized high-volume renewal processing for customers with 800+ GPS units using grouped data processing, bulk operations, and reduced repeated database work.
- Designed and built a role-based Kanban workflow to organize operational tasks by category, role, and individual ownership; also developed reseller operations, subscription/offline-unit monitoring, and operational dashboards.
- Implemented advanced filtering, Excel import/export, scheduled processes, push/email notifications, Google authentication, QR codes, and Postman-based API documentation.

Vastel | Web Developer - Orin GPS Tracking Platform Feb 2019 - 2021
Contributed to the early development and optimization of Orin, a GPS tracking platform for vehicles, heavy equipment, and other assets.

- Improved GPS tracking accuracy by implementing anomaly detection and filtering for abnormal coordinate jumps based on distance, time intervals, and vehicle movement states.
- Developed telemetry logic to classify moving, idle, and stopped states, and built journey reporting for distance, driving duration, stop duration, and stop locations.
- Integrated GPS devices through protocol-based parsers that decode incoming messages into structured telemetry such as coordinates, speed, ignition status, and timestamps.

SELECTED PERSONAL PROJECTS

AI-Powered Personal Finance Telegram Bot - Stable personal finance automation for daily transaction tracking, categorization, automated monthly reporting, and natural-language Q&A over financial data using an integrated AI layer.

Stock Screening & Strategy Evaluation System - Multi-strategy stock screener that logs every screening result and subsequent return to Google Sheets, enabling historical comparison of average returns and profitability across strategies.

EDUCATION & LANGUAGES

Bachelor's Degree in Informatics Engineering - Universitas Brawijaya, 2019 | Indonesian: Native | English: Intermediate / Working Proficiency
